

## POLICY OF INFORMATION SECURITY

Energoprojekt Oprema a.d. provides protection of information and property from all accidental or intentional threats (internal or external) by establishing, implementing, executing, monitoring, reviewing, maintaining and improving information security management system (ISMS) according to ISO 27001:2013.

Basic commitments of the information security are:

- Identification of risks to information security and assessing them within planned intervals or during significant changes within the organization
- Managing high degrees of risks and reducing them to an acceptable level through an adequate plan of risk treatment.
- Ensuring confidentiality and information integrity
- Providing constant availability of information to users where the access rights are allowed
- Protection of information from an unauthorized access
- Conducting trainings of employees and external employees on the information security within the organization.

Management and all employees are obliged to apply all procedures, act according to the security rules and report noticed violations and incidents.
