

ENERGY EFFICIENCY POLICY

As one of the important policies in its management, Energoprojekt Oprema a.d. singles out the increase of energy efficiency as well as energy saving in accordance with ISO 50001:2011.

The objectives of introducing the energy efficiency management system in Energoprojekt Oprema a.d. are:

- The increase of energy efficiency and energy saving
- Supplying and installing energy efficient equipment for its own and the needs of clients
- Reduction of costs
- Contribution to the national energy efficiency policy and reduced emission
- Contribution to the global fight against climate changes

EPO shall implement the aforementioned objectives through:

- Gathering and analyzing available information on the consumption of electricity and thermal energy as well as all types of fuel.
- Engaging necessary resources for reexamination of the consumption, definition and implementation of general and specific objectives regarding energy efficiency
- Educating employees on energy efficient technologies
- Educating employees on rational energy consumption
- Acting in accordance with the laws and regulations relating to the usage of energy, consumption and energy efficiency.

Management of Energoprojekt Oprema a.d. requires all of its employees to promote a frugal attitude towards energy with the goal of its rational usage.

Belgrade, 04.02.2019.
